

AG250-103

Tap-a-Flow® Stainless Steel Pedal & Lock

Features:

- Stainless steel floor pedal
- Precise hands-free control of the water flow
- Easy to install with few tools, stand-alone design
- Works with AG250-002 Tap-a-Flow mechanical valve
- Smooth and comfortable operation

General Description:

The AG250-103 Tap-A-Flow hands-free sink pedal is ideal for kitchens, bathrooms, medical offices, and public washrooms. Hands-free operation keeps your faucets clean and reduces cross-contamination when touching them. Using the sink pedal significantly reduces water usage and provides precise control of the water flow.

The AG250-103 is ideal for an active family with day-to-day faucet usage. Once installed, many users do not want to switch back to hand-adjustable faucets. The convenience of hands-free operation makes the sink pedal an essential accessory to any kitchen installation. Pressing on the center of the pedal starts water flow, releasing the pedal stops the water flow.

For parents with young children, older adults with limited mobility and toddlers who can't reach faucets yet, the sink pedal offers convenience, cleanliness, and water conservation. With the sink pedal, there is no more "forgetting to turn the water off" problem. Older adults with hearing difficulties appreciate that convenience.

The Tap-A-Flow sink pedal works with AG250-002 mechanical water valve and is included with AG250-811 installation kit. To install Tap-A-Flow sink pedal, drill a few holes, route control cable, and mount the valve in-line with hot and cold water.

Mechanical Specifications:

- Width: 6 inches
- Length: 2-7/8 inches
- Height: 3-1/4 to 4-1/4 inches

Material

- Brushed Stainless steel

Valve compatibility

- AG250-002 mechanical water valve

Accessories (included):

- Mounting plate
- Mounting screws
